Education

University of North Carolina at Chapel Hill

Bachelor of Arts in Computer Science

Graduating May 2025

Chapel Hill, NC

Experience

Verizon

May 2024 – August 2024

Software Engineering Intern

Cary, NC

- Designed and implemented a TM Forum geographic address validation API.
- Created integration tests and deployed to production, currently in use by 5 national retailers.
- Decreased onboarding and integration time for partners by 50%.

CSXL

September 2023 – December 2023

Developer

Chapel Hill, NC

- Developed a check-in system for a computer science lab, streamlining the reservation process.
- Enabled users to create reservations with friends, enhancing collaboration within the lab.
- Modified existing application to allow for users to make group reservations.
- Interfaced with the school's login portal, providing secure access using student IDs.

Verizon

May 2023 – August 2023

Software Engineering Intern

Remote

- Developed an end-to-end streamlined workflow timeline, reducing customer rep search time by 34%.
- Created a versatile tool, now being repurposed for public use, resulting in increased efficiency.
- Designed API endpoints, improving data retrieval speed and enhancing the frontend user experience.
- Explored optimization methods, minimizing time spent searching for answers by customer reps.

Projects

Custom Cover Letter Bot | *JavaScript, HTML, OpenAI API, Python*

September 2024

- Interfaced with OpenAI's API to accept a job description and PDF resume.
- Create a personalized cover letter for every job application.
- Working on integrating as a Chrome extension.

Python SMTP Server/Client | *Python3*

March 2024

- Created a functioning SMTP mail server and client using Python.
- Utilized a recursive descent parser to ensure command adherence to grammar.
- Able to send mail to and from client to regular mailbox.
- Added MIME encryption to be able to send images.

Pomodoro Timer | *Java, JavaFX, Maven*

December 2022

- Crafted a personalized Pomodoro timer in Java to maximize study time effectively.
- Added utilities such as sticky notes, reminders, alerts, calendar, and weather.
- Integrated with Google Calendar API to fetch and display upcoming events.

Technical Skills

Languages: Python, Java, C, HTML/CSS, JavaScript, SQL, Angular, TypeScript, Bash

Technologies/Frameworks: Linux, GitHub, JUnit, WordPress, AWS, Docker, Spring Boot, Spring WebFlux
